Hi.

This is a sample cover letter that I just wrote to demonstrate what this looks like in general. You may find that some other options may tend to work better for your personal tastes, and that's okay. Feel free to customize this to your needs.

Hopefully this project template is easy to understand how to use. In case of it not making sense, though, here's a quick rundown:

1. The cover letter and resume .tex files should not be edited — those are mostly set and forget. Various sections are edited separately in the `sections` folder and then imported into the major document. I would recommend against touching the `cover.tex` file since it's highly unlikely that you would need to change something in there. `resume.tex` does need a little more customization in the sense that you can add/delete sections that you feel are relevant/irrelevant to you.

2. You are free to create/delete/manipulate the importable sections as you see fit. I've left the defaults pretty blank so that you can see how a recommended styling should be done, but you can use whatever styling you desire.

    - There's no `.cls` file - everything is defined in standard `.tex` files and then imported into the two documents. Yes, this means that there's more for you to do when customizing the items, but I think it makes for a simpler project and easier to understand interface for document creation.

3. When you're ready to compile a document, call `make`, and it should create three different pdf files. If it doesn't, you might need to install a utility called `pdftk`, which is used to concatenate the resume and cover letter file together.

    - In the makefile, there's a variable called `NAME` that you will need to edit in order to rename the files to your name. It's located at the very top of the makefile - just put your normal name in there and `make` should take care of the rest.

Hopefully that's all you should really need to know.

Below is a sample finisher as an example.

Sincerely,

Jane Q. Taxpayer

Mitchell Case

Junior Software Engineer

mitchell.case.24@proton.me (940) 597-1256 mitchell-case mectx02

An aspiring software engineer with strong skills in fundamental test methodologies, computer programming, and PCB designs. I'm seeking a full time position where I can further my skills in testing, validation, and product integration.

Education

Texas A&M University | College Station, TX *(May 2025)*

- Bachelor of Science in Electronic Systems Engineering with a minor in Cybersecurity.
- Coursework focus in testing & validation, computer networking, and embedded systems programming.

Experience

GTS Technology Solutions — Junior Software Engineer | Dallas, TX *(Sep. 2025 – present)*

- Developed and validated a comprehensive testing suite for APMS that reduced bug incidence during development.
- Refactored provisioning scripts to satisfy internal and Apple requirements, enabling feature rollouts within 1–2 days.
- Optimized database routines, cutting latency by up to 95%.
- Designed and launched web interfaces that monitor DOA devices and their replacements throughout production.
- Built Power BI dashboards that auto-refresh from the asset tracking system, meeting managerial reporting needs.

GTS Technology Solutions — Lead Integration Technician | Dallas, TX *(Jun. 2024 – Sep. 2025)*

- Oversaw daily operations for a 20-person team deploying large-scale iPad and MacBook projects.
- Conceived, prototyped, built, and deployed barcode software that replaced legacy systems & boosted throughput.
- Conducted training, authored procedural documentation, and continuously refined instructional materials.
- Created, coded, and validated Python scripts interfacing with the server infrastructure to enhance workflow efficiency.
- Provided technical support to Apple engineers and internal teams during troubleshooting.

Texas A&M University — Lead Undergraduate Teaching Assistant | College Station, TX *(Jan. 2024 – May 2025)*

- Guided students through the Teradyne ETS-364 ATE curriculum, fostering mastery of advanced test concepts.
- Collaborated with industry test engineers to revise coursework and integrate contemporary programming best practices.
- Modernized laboratory manuals and co-authored the final examination to assess student competency.
- Developed and presented lectures on DAC/ADC testing fundamentals and validation techniques.

GTS Technology Solutions — Integration Technician | Dallas, TX *(Jun. 2023 – Aug. 2023)*

- Supported engineering teams in diagnosing and rectifying server management and networking challenges.
- Executed deliveries of computer hardware to Dallas ISD sites, achieving consistently high customer satisfaction.
- Authored concise, comprehensive internal guides outlining configuration and imaging procedures for client devices.

Projects

Key-Fill Manager *(Jun. 2024 – May 2025)*

- Collaborated with four other students as part of a year-long senior project to develop a standalone device managing encryption keys for Project 25 radios.
- Designed schematics, PCBs, and FPCs implementing circuit designs tested for complete integration of finalized product.
- Provided assistance to team members with software development and hardware troubleshooting.
- Project was awarded $1000 for best ESET project and $1000 for entrepeneurship potential.

Flight Simulator Radio Panel *(Nov. 2022 – Feb. 2024)*

- Designed, constructed, and tested a self-built radio panel imitating those found in airplane instrument panels.
- Programmed MCU using C/C++ and implemented USB communication from device to computer, enabling communications between physical hardware and flight simulation software.

Awards

Eagle Scout | Scouts, BSA *(Jul. 2020)*

- Served in leadership positions within troop, including Webmaster, Troop Guide, and Senior Patrol Leader.

Skills

- DFT; validation/verification; hardware testing; automated test equipment (ATE); PCB design; SPICE.
- Program languages: C/C++; Python; Javascript; Java; MATLAB; LabVIEW; TestStand
